

If this is your first time attempting to provide your own milk for your baby, you may be feeling nervous about trusting that your body will provide enough. The same may be true if you have attempted to breastfeed a previous child, but didn't meet your goal. Consider taking this prenatal assessment and reviewing the results with your healthcare provider or setting up a prenatal consultation with a skilled lactation support professional.

 Have you experienced any breast changes during this pregnancy? Ideally you have noticed that your breasts have gotten heavier, fuller, or more sensitive may also have noticed that your areola has become larger and darker. The all a good sign that your the change in hormones that go along with pregnare laying the foundation for a successful lactation experience. 	ve. You ese are Yes / No
• Are your breasts similar in size and not widely spaced? Typically we see breath that are pretty symmetrical and not more than two fingers width apart.	reasts Yes / No
Do you have flat or inverted nipples?	Yes / No
• Do you have a history of PCOS, thyroid disfunction, insulin resistance, or infertility? The presence of these underlying health conditions could negat impact a person's ability to lactate. The sooner your healthcare provider k about these conditions, the sooner you can work on a solution.
